                                                                                                                                                                                                                                                                                                                                                                Isold=092570-2; Sequence=VSP_003712, VSP_003713; TISSUE SPECIFICITY: High expression of isoform alpha in skeletal muscle. High expression of isoform beta in skeletal muscle and low expression in fetal brain and placenta.

DISEASE: Involved in Ewing's sarcoma through chromosomal translocations t(9;22) (q22-31;q11-12) which involve EWS and NR4A3. DISEASE: Involved in a form of extraskeletal myxoid chondrosarcomas (EWC) through a chromosomal translocation t(9;17) (q22;q11) that involves TAF2N and NR4A3. SIMILARITY: Belongs to the nuclear hormone receptor family. NR4
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   YCPTDOAAAGTDABHVQQFYNLLTA -> VSFMISCFQMND QGLYLWLLVTRVD (in isoform Beta). -1-TISSUG SPRECIFICITY: Expressed at high levels in cultured apoptotic neuronal cells and fetal brain, and at low level in adult brain.
-1- SIMILARITY: Belongs to the nuclear hormone receptor family. NR4
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   [2]

I differentially induced in the hippocampal dentate gyrus by electromically verselves. Windled selfaures.

Brain Res. Mol. Brain Res. 47:251-261(1997).

-1- FUNCTION: Probable nuclear receptor. May confer liver-specific regeneration along with HRR.

-1- FUNCTION: Probable nuclear receptor. May confer liver-specific regeneration along with HRR.

-1- SUBCELLULAR LOCATION: Nuclear in quiescent liver but is rapidly induced following partial hepatectomy and is specific to hepatic growth as it is not induced in other mitogen-treated cells. Expressed at very low levels in the lung, spleen and cells. Expressed at very low levels in the lung, spleen and cells. Signal in the brain.

-1- SIMILARITY: Belongs to the nuclear hormone receptor family. NR4
                                                                                                                                                                                                                                                           NW42 RAT
